

# PhD or MSc position in Plant Functional Ecology

at the University of Waterloo (ON, Canada)

Funding available to study the role of trait diversity and composition on the productivity of tree communities along a drought gradient.

For a PhD, the other chapters will be developed by the student based on common interests with the supervisor and available opportunities. Areas of interest include plasticity, trait integration, selection, community ecology & climate change.

The experimental site is located in Quebec, such that fluency and interest in French are desirable.

For Fall 20
